## Summary

The U.S. space exploration company SpaceX successfully **launched the first private manned spacecraft** Crew Dragon on May 30th. **With this monumental success, the name Elon Musk is trending again.**

Elon Musk has **become a household name** even in Korea thanks to the rising interest in his electric vehicle company Tesla. But manufacturing electric vehicles and launching spacecraft **are not the only areas of interest** for this South African born entrepreneur. **The businesses he's working on** also include Hyperloop, **an ultra-fast transportation system using sealed tube and air pressure** and SolarCity that provides solar energy service, **to name a few. Exploring new business areas that demand technologies that only seem to exist in sci-fi movies**, he is often compared to the **real-life version of Tony Stark, AKA Iron man.**

He was in the media spotlight not only for the good news. He sometimes grabbed public attention by his **bold behavior and straightforward way of speaking.** Some point out that most of his businesses don't make much profit and think **he's a bit overrated.**

But many see inspiration in Musk's **entrepreneurship and determined spirit. These attributes are rare these days.** A lot of Americans got together near the launch pad in Houston and cheered while watching the successful launch of the SpaceX rocket. But it was not only the Americans who **see a glimmer of hope in Elon Musk's success story**, especially in this difficult time of the Corona outbreak.

해석

1. launched the first private manned spacecraft 최초의 민간 유인 우주선을 발사하다
